Setup and Layout

How do I customise my design?

You customise your shop directly from the back office, without writing a single line of code. You choose a colour theme, the home page presentation and the menu layout, then fine-tune each element with a right-click on the page.

What you can adjust

- **The theme**: colours are set by type of page and object, and change everywhere at once. You can then fine-tune a specific object if you wish.
- **The layout**: category menu at the top or as a separate menu on the left, advertising or commercial banner, display of the various menus.
- **The home page**, in six formats: products on display shelves, large image, text and image blocks, category thumbnails, carousel, videos.
- **The site elements**: title as an image or as text, logo, favicon (the little icon in the browser tab), background music if you fancy it.

Layout mode

Turn on layout mode, then right-click on the part of the page you want to change: a menu offers the settings for that exact spot. You see the result straight away, just as your customer will.

A shop for every season

The site collection lets you prepare a version of your shop for Christmas, the sales or Mother’s Day, then switch back to your usual version once the celebrations are over. It also works as a backup: before painting everything red, keep a copy of the current version.

Setup and Layout

Your shop adapts to phones on its own: there is no second version to maintain.
