□□ Test and Production Environments

How do I publish my changes to my online shop?

You work on your test site; your customers see your online shop. To put your changes online, click the “Publish” button.

Four publications to choose from

- **Catalogue**: categories, products and their images, value lists;
- **Texts**: texts, design images, music, email templates, pages;
- **Customisation**: theme, layout, styles, colours;
- **Options**: delivery, payment, countries, SEO, order statuses, customer statuses.

Tick what you want to publish, then click “Publish your choices”. An email confirms the publication.

Good to know

- You can publish just one part, for example the catalogue after adding products;
- publishing is blocked as long as the active payment methods and delivery methods are not configured in production.
