□□ Catalogue Management

How does stock management work?

Stock management is active by default. Enter the stock of each product on its product page, in the “Stock” field.

What happens automatically

- The stock goes down with each confirmed order, including orders by cheque or bank transfer awaiting payment;
- in the basket, the quantity ordered is limited to the available stock;
- at zero, the product is shown as “Unavailable”.

Restocking

With the “Suppliers” menu, prepare your purchase orders; when the goods are received, the stock of your products is updated automatically.

Keep an eye on

- After a cancellation or a refund, the stock is not updated: correct it if the product goes back on sale;
- regularly check your low-stock products in the product list.

Classes, workshops and rentals

A bookable item does not use stock: what counts is the **places of each session**, or the **units for rent** day by day. The item’s stock does not go down when a place is booked. See booking classes and workshops and renting out holiday homes and equipment.
