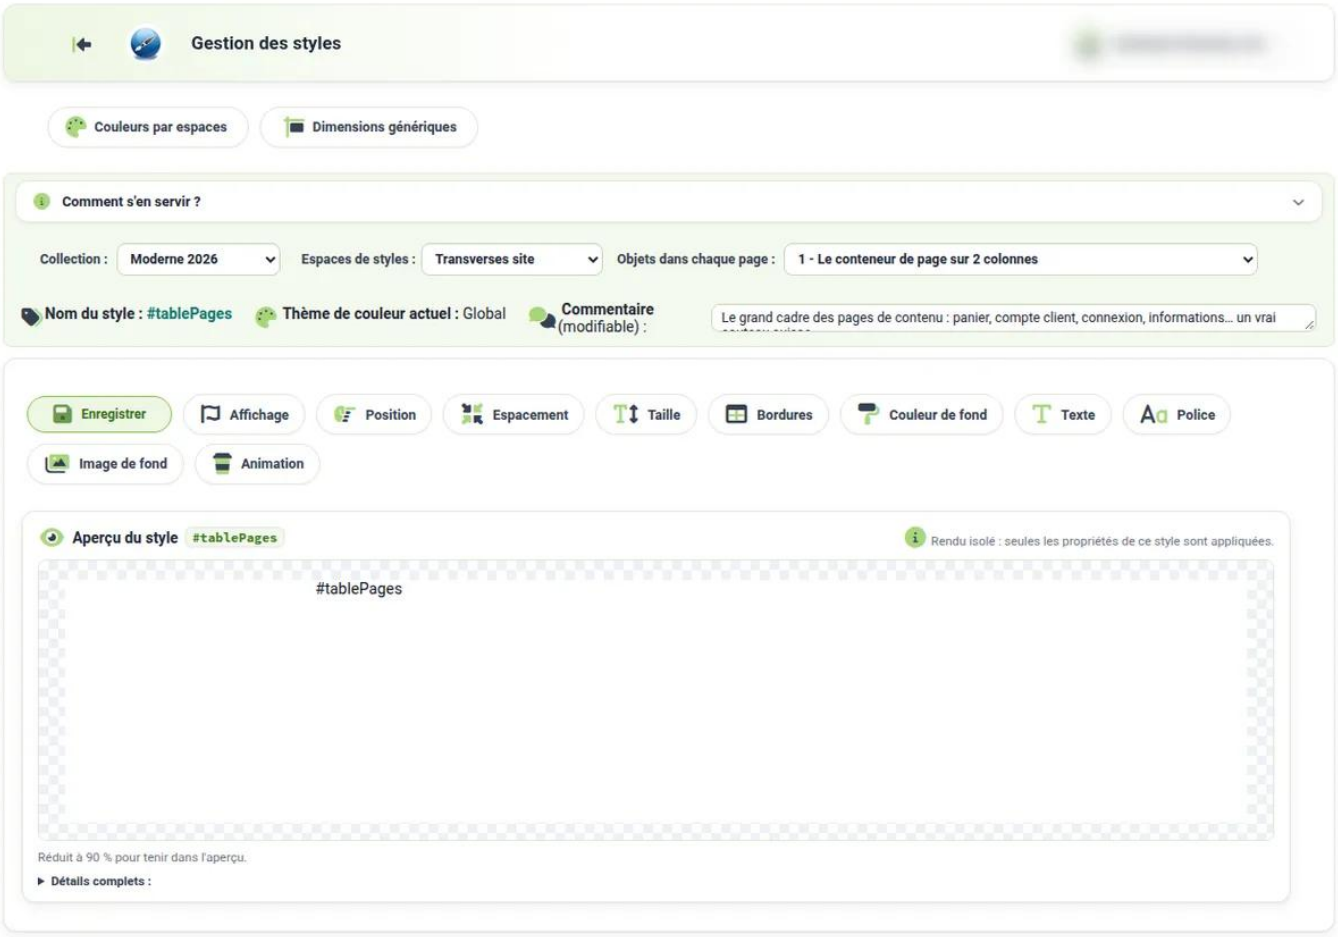
Design and Customisation

How do I add animations and visual effects?

The “Styles” menu has an “Animation” tab: there you set CSS animations on the elements of your shop, without writing any code.



Other visual effects

- **the image carousel** on the home page;
- **the video** on the home page;
- **background images**, borders and shadows, adjustable in the styles;
- **the theme colours**, which set the tone for the whole shop.

In moderation

Subtle animations show off your products; too many effects distract your customers and slow down the display, especially on mobile. Check the result on your test site before publishing.
