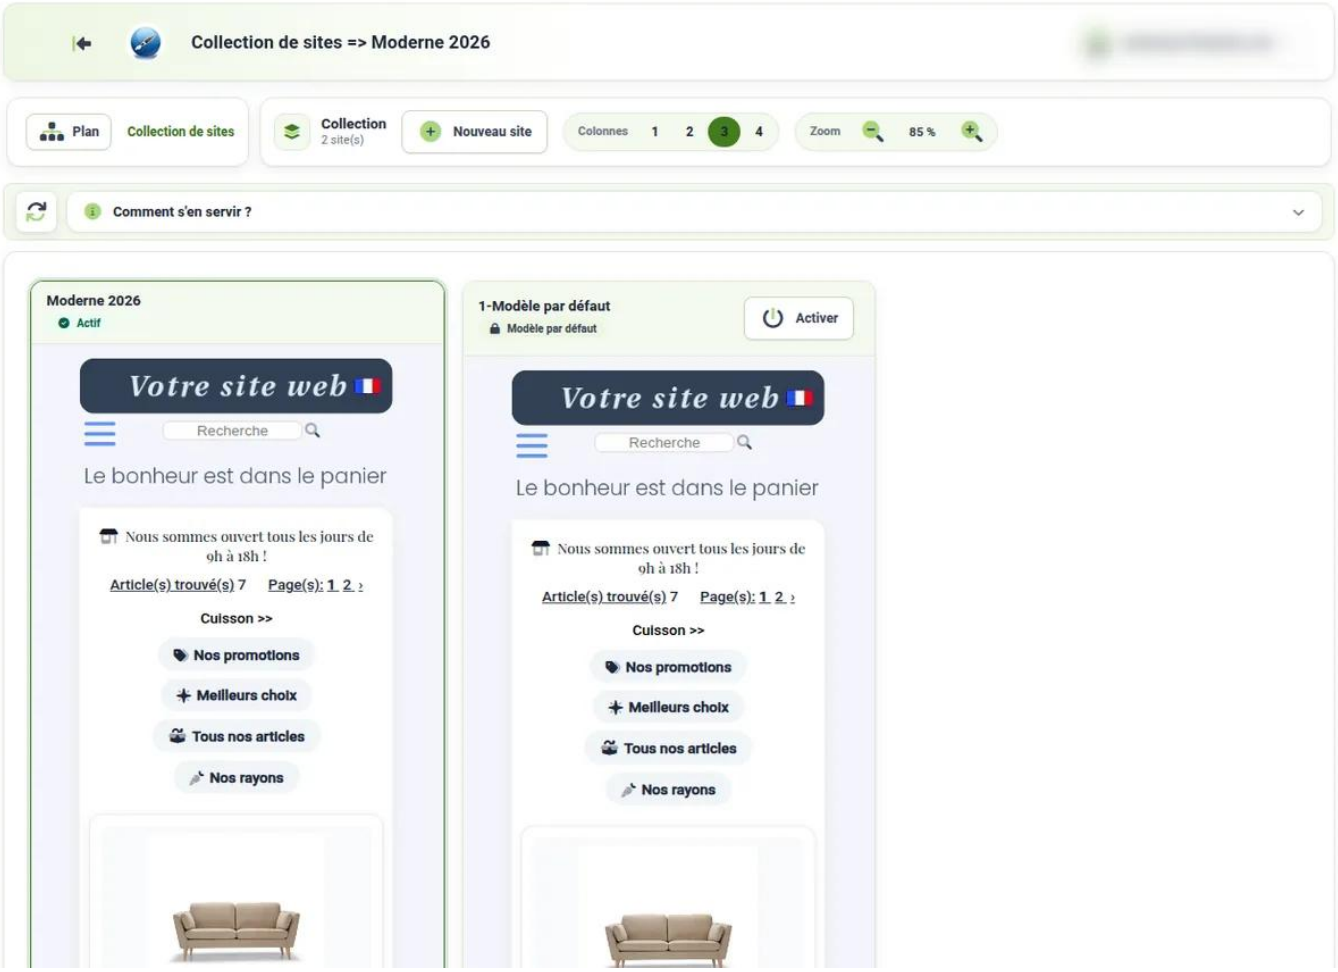
Site Collection

What is the site collection?

The site collection lets you prepare several versions of your shop and switch from one to another in a single click. Your catalogue, your customers and your orders stay the same: only the presentation changes.



What each version contains

- its colour theme and its styles;
- its layout: position of the menus, advertising and banner;
- its home page template: product shelves, carousel, thumbnails, video...;
- its design images: title, logo, backgrounds.

What is it for?

- **Keep your shop alive**: one version for Christmas, one for the sales, one for the summer;
- **Test without risk**: you work on a copy while the active version stays in place;
- **Roll back**: the previous version remains available and you can reactivate it whenever you like.

The collection is in the “Layout” menu, “Site collection” tab.
